

*“We have been using Dura-Tuff grouser bar for over 15 years on our track shoes and in several other applications. The bar meets all our customer requirements and expectations in every area and is therefore the only bar we use. Dura-Tuff Wear Products provide us with first class service, reliability and a quality product that enables us to deliver the best possible value to our customers every time.”*

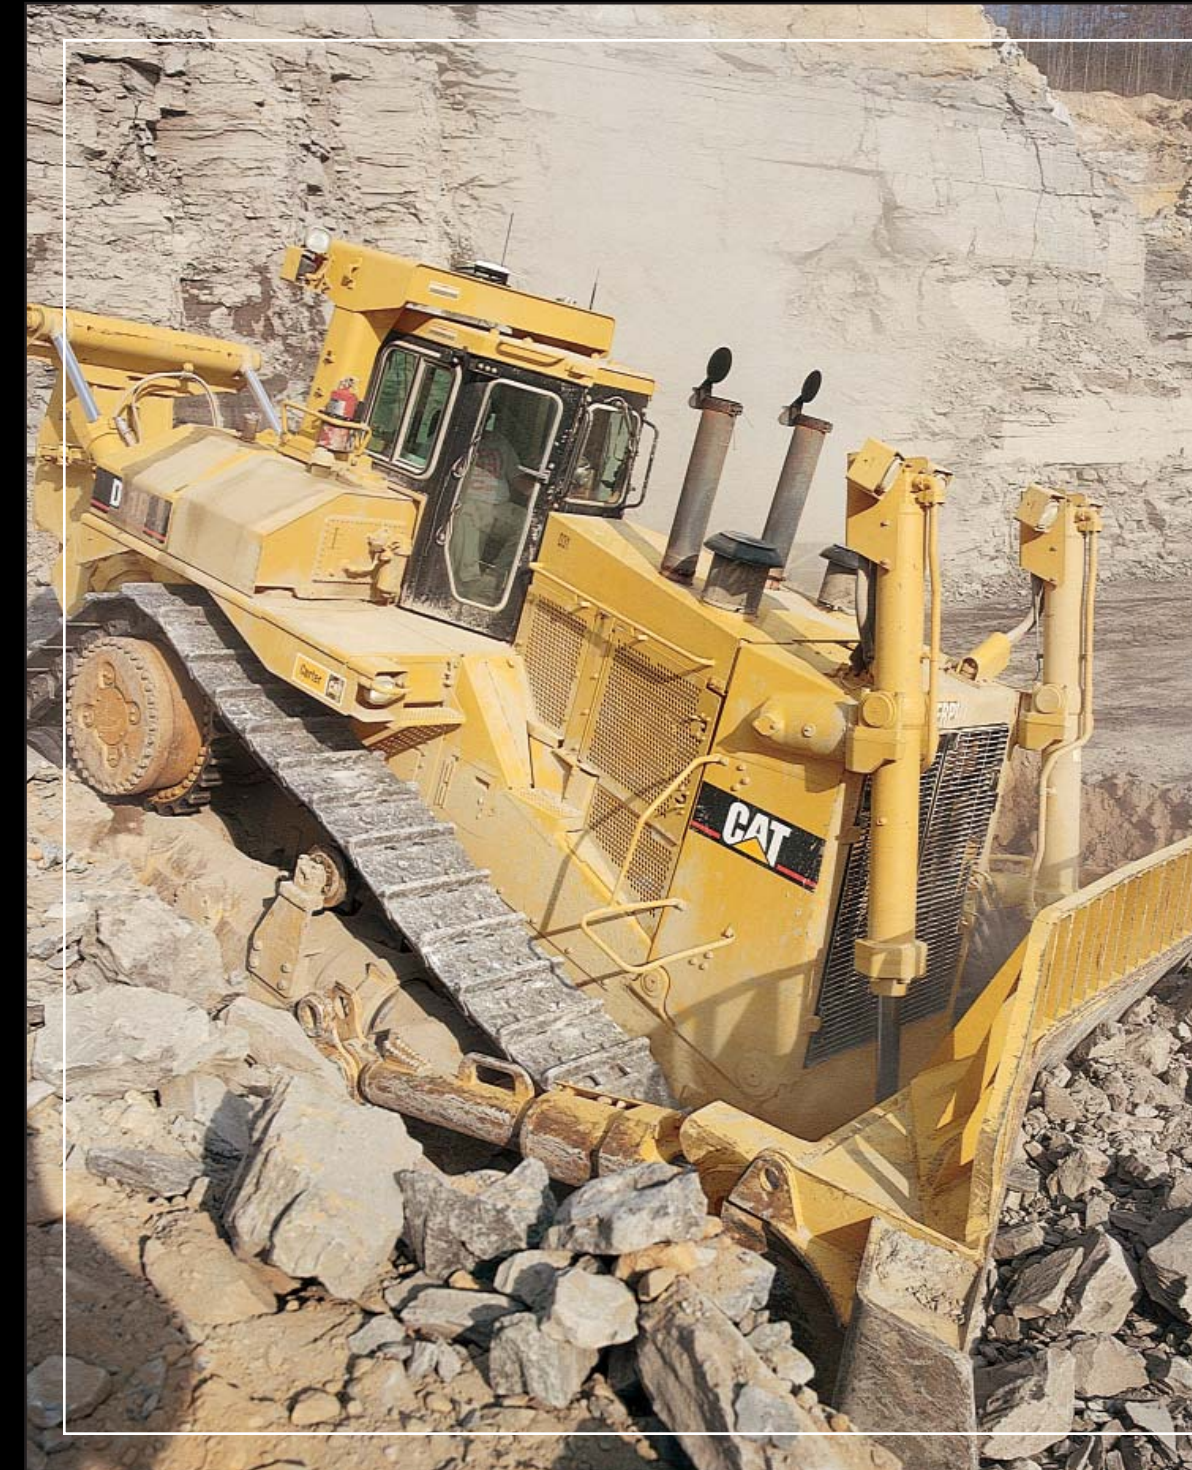

Louis Foster, Weld Shop Manager, Westrac Australia

*“We have been a machinery, parts, and service supplier to some of the largest mining companies in the world for 75 years. The parts we sell must perform flawlessly under some of the most rugged mining conditions in the western United States. For more than 16 years, we have been selling Dura-Tuff grouser bars to these demanding customers. Dura-Tuff grouser bars outlast anything we have seen available on the market, that’s why we only sell one brand of grouser bar—Dura-Tuff!”*

Scott E. Brown, Elko Parts Supervisor, Cashman Equipment

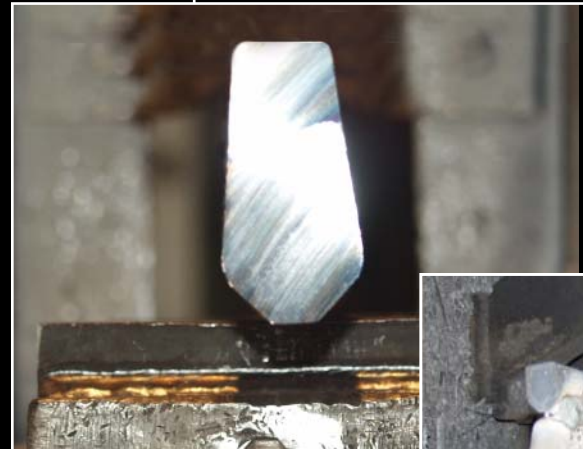

*“I have been a welder for 25 years. Most of my experience with regards to welding grouser bar was with competitive bar to Dura-Tuff. Recently, I was able to weld some Dura-Tuff grouser bar for the first time on a track for one of my key customers. The performance was outstanding and I immediately began to recommend it as my first choice as the most durable, longest wearing grouser bar on the market.”*

William D. Booth, Owner, Booth Welding

**What if  
you could find a  
grouser bar that’s  
even tougher than  
a new shoe?**

**You can now.**

Dura-Tuff grouser bars are thru-hardened to a Rockwell hardness of up to 55 to ensure a long life in your most extreme conditions. These bars are available in eleven sizes, straight, curved or curved and forged to fit.

## The truth about grouser bars

Myth	Reality
<b>New shoes are always better.</b>	<b>Dura-Tuff</b> grouser bars are even harder than those on a new shoe. Dura-Tuff grouser bars are harder and last even longer than the grouser bars that typically come on a new shoe. Regrousering with Dura-Tuff grouser bars can in some instances extend the life of a shoe by up to five* times the normal life of the shoe. * Call to get copies of actual customer testimonials.
<b>All grouser bars are the same.</b>	<b>Formulations are different** and Dura-Tuff bars are tougher.</b> Independent metallurgical analysis of Dura-Tuff grouser bar shows that the metallurgical composition and proprietary through-hardening process creates a bar that is up to ten points (on the Rockwell C scale) harder than competitive grouser bar and up to five points harder than original equipment track shoes. ** Call for more information on the results of metallurgical studies of grouser bars.
<b>Reshoeing costs me only slightly more than regrousering.</b>	<b>You save a considerable amount when you regrouser.</b> Regrousering will save you hundreds of dollars for a small shoe (sizes 3-8) and more than a thousand dollars for a large shoe (sizes 9-13). Regrousering also extends the life of track shoes. All sizes and models of Dura-Tuff grouser bars can even be welded on tracked vehicles at the job site, saving you additional time and money.
